

RDock

How to install and compile

Peter Schmidtke

July 1, 2012

1 Introduction

1.1 Prerequisites

In order to be able to install RDock properly you need several pre-installed libraries or executables :

- gcc
- g++
- gettext (necessary for popt)
- popt (shipped with the RDock source code)
- cppunit (optional if you want to build the tests for RDock)

1.2 License & Warranty

Rdock is distributed under the GNU lesser General Public License verison 3.
